

Post Implementation Evaluation Report

Data Warehouse - Transportation

Project Dates: 6/2001 through 6/2003

Project Cost: \$635,879

Project Objectives

The Data Warehouse Proof-of-Concept project objective was to apply the Data Warehouse methodology along with new technology consisting of concept and tools that allow decision-makers throughout the agency to have access to information from a centralized data repository in an application neutral environment. The Data Warehouse would be supported by Metadata, which contains information that describes the data and the extraction, transformation and loading of the data from the source operational systems.
